PROFILE

Recent Computer Science graduate with hands-on experience developing and testing REST APIs using Django REST Framework and FastAPI. Practical experience working on production-oriented backend systems during a 3-month internship, including a municipal digital services platform and a gym e-commerce application. Strong interest in backend development, database design, API architecture, and writing clean, maintainable software.

EXPERIENCE

Backend Development Intern | MindRisers Technology

3 Months | Aug 1, 2026 – Oct 1, 2026

Built and maintained REST APIs using Django REST Framework and PostgreSQL/Django ORM for production web and mobile applications, handling relational data modeling, filtering, and serialization. Tested and debugged endpoints using Postman and Swagger and extended existing codebases within established project architecture. Delivered two key projects during the internship:

Digital Biratnagar (Digital Palika Mobile Application)

- **Extended and maintained backend modules** for a municipal digital services platform covering administration, revenue, health, legal and judicial services, welfare, planning, finance, and infrastructure.
- Developed REST APIs across multiple modules and optimized database queries using `select_related` and `prefetch_related`.
- Implemented file uploads, role-based permissions, and pagination across core modules.

PrimeX Gym E-commerce Platform

[Live](#)

- Built backend functionality for a gym-focused e-commerce platform, including product management and event features via REST APIs.
- Implemented and tested database-driven APIs with Django REST Framework and Django ORM, integrating with the frontend team's requirements.

PROJECTS

HCKonnect-Community Management System

[GitHub](#) | [Live](#)

A centralized web platform for Herald College Kathmandu's student communities, replacing scattered tools (WhatsApp, email, Drive links) with a single system for community management, events, discussions, and resource sharing — integrated with Google Gemini AI for content generation and applicant ATS scoring.

- Built a scalable full-stack application using **React** frontend and **Django & Django REST Framework** backend with **PostgreSQL**.
- Implemented **JWT authentication** and Role-Based Access Control (RBAC) with structured REST APIs for memberships, events, and content management.
- Built an AI-powered ATS scoring system using **Google Gemini AI** to automatically evaluate and rank member applicants' CVs.
- Implemented event creation and registration, plus Gemini-powered writing assistance for event descriptions, posts, and vacancy listings.
- Built a community engagement dashboard with analytics for community managers to track member activity, recruitment, and growth.
- Added a discussion panel supporting both public topics and private, members-only community discussions, plus a resource section for uploading and accessing shared files.
- Introduced Redis caching to optimize pages with heavy API/content load, reducing load times on data-dense pages.

Electronics ERP Backend

[GitHub](#)

A production-oriented ERP backend for managing products, suppliers, inventory, purchasing, sales, invoicing, and role-based business operations for an electronics company.

- Built a scalable backend using **Django, Django REST Framework, and PostgreSQL**, following service-layer architecture to separate business logic from API views.
- Implemented **JWT authentication and Role-Based Access Control (RBAC)** for Admin, Inventory Manager, Sales Manager, Supplier, and Employee roles with object-level access restrictions.
- Developed transactional **inventory and order management**, including warehouse-level stock tracking, purchase order state transitions, sales order processing, low-stock detection, and prevention of overselling using database-level locking.
- Implemented **supplier, product, purchasing, sales, invoice, and payment APIs** with filtering, searching, ordering, pagination, and optimized database queries using `select_related` and `prefetch_related`.
- Integrated **Celery and Redis** for asynchronous tasks such as email notifications, and **Django Channels** for real-time in-app notifications and business events.
- Added **ContentType-based audit logging**, automated API documentation with **drf-spectacular**, automated tests including transactional/concurrency scenarios, and a **Dockerized deployment setup** for Django, PostgreSQL, Redis, Celery.

Voteहाल: Secure Online Voting System

[GitHub](#) | [Live](#)

A full-stack Django voting platform built with a 6-person team, designed for transparent, accessible digital elections and surveys — with OTP-based multi-step authentication and poll-based voting for verified users.

- Worked as backend developer on a 6-person team (PM, BA, 1 UI/UX, 2 frontend, 1 backend), collaborating in a professional workflow with Jira for task tracking, weekly stand-ups, and documented meeting minutes.
- Owned backend architecture and API design using Django and PostgreSQL, integrating closely with the frontend team to support the full authentication and voting flow.
- Implemented one-vote-per-poll enforcement and admin-controlled election creation, along with an API layer powering real-time poll result visualizations (graphs) on the frontend.

SKILLS

Languages: Python (strong fundamentals), C, JavaScript

Backend Frameworks: Django, Django REST Framework (DRF), FastAPI

Backend Infrastructure: Docker (basic), Redis (basic), Celery (basic)

Databases & ORM: PostgreSQL, MySQL, SQLite | Django ORM, SQLAlchemy(basic)

Frontend & Python Libraries: HTML, CSS, React, Bootstrap, Tailwind CSS

Python Libraries: NumPy, Pandas, Matplotlib

Tools & Practices: Git, Postman (API documentation & testing), Figma

CERTIFICATIONS

- **Database Training** – *Herald College Kathmandu (2024, 1 month)*
- **Python with Django** – *MindRisers (2024, 2 months)*

EDUCATION

- **Bachelor's in Computer Science (BCS)** | *Herald College Kathmandu, Naxal* 2023 – 2026
- **+2 (Computer Science)** | *Bal Kalyan Vidya Mandir (B.K.V.M.), Biratnagar* 2021 – 2023 | **GPA: 3.56**
